

BP
Whiting Refinery
2815 Indianapolis Boulevard
Whiting, IN 46394-0710

Site Background

BP facility consist of the Whiting Refinery and the J & L Highlands and has been in operation for over 100 years.

IDEM and BP representatives started negotiations for an Agreed Order (AO) in 1992. This order was signed in December 1995 and was effective January 18, 1996. This order required BP to conduct a RCRA Corrective Action investigation. BP had been performing voluntary remediation on the facility before IDEM became involved.

Current Status

BP has installed several new free phase hydrocarbons (FPH) recovery systems and started elevating product pipelines to above ground to prevent additional FPH from impacting the ground water and soils. The Environmental Indicators (CA 725 and CA 750) have been determined to be under control.

Future Action

Develop a sampling plan and Human Risk Assessment for the J & L portions of the facility and continual recovery of FPH's. These plans will help in the redevelopment of these areas.
